MINI PROJECT REPORT ON

**“A STUDY ON ROLE OF BUSINESS ANALYTICS IN BUSINESS
GROWTH WITH REFERENCE TO TRENDS IN BANGLORE”**

UNDER THE GUIDANCE OF

Mrs. CHAITRA RAO

ASSISTANT PROFESSOR IN DEPARTMENT OF MANAGEMENT

SUBMITTED BY

KUNAL PAUDYAL

REG NO.: UO5AC23MOO42

2025-2026

ACKNOWLEDGEMENT

We express our unbound gratitude to the almighty for his grace in completing our dissertation work successfully. We would like to express our sincere thanks to Dr. Kurian, Principal of Alva's College, for giving us an opportunity in conducting the study. We are grateful to Mrs. Surekha Rao, Dean Department of Management, for her support for conducting this research. We are thankful to the Adviser, Mrs. Prajna Assistant Professor, Department of Management, for her support for this research. We are extremely thankful to Mrs, Chaitra Rao Assistant Professor in the Department of Management, for her guidance & kind support by providing us the necessary information in completing this project.

THANK YOU

DECLARATION

I hereby declare that the mini project titled "A STUDY ON ROLE OF BUSINESS ANALYTICS IN BUSINESS GROWTH, ,TRENDS" is an original piece of research work carried out by me under the guidance of Mrs. Chaitra Rao. This project has not been submitted to any other institution for the award of any degree, diploma, or other similar titles. The data and findings presented in this project are authentic to the best of my knowledge and belief.

CHAPTER-1
INTRODUCTION

CHAPTER1

INTRODUCTION

In the digital era, data has become one of the most valuable assets for organizations. Businesses today generate massive amounts of data through daily operations, customer interactions, online transactions, and supply chain activities. To convert this raw data into meaningful insights, companies rely on business analytics, which involves the use of statistical tools, data mining techniques, predictive models, and visualization methods to support decision-making.

Business analytics can be broadly classified into descriptive, predictive, and prescriptive analytics. Descriptive analytics helps in understanding past performance, predictive analytics forecasts future trends, and prescriptive analytics suggests actions for optimal outcomes. These analytical approaches enable organizations to make informed decisions, reduce risks, and identify new growth opportunities.

In a highly competitive market like Bangalore, which is known as India's technology and business hub, the role of business analytics has become even more significant. Companies in the retail sector especially fashion retail chains like Reliance Trends, are increasingly adopting data-driven strategies to enhance their competitiveness. By analysing customer purchase patterns, seasonal demand, and market trends, such organizations can improve inventory management, personalize marketing campaigns, and increase customer satisfaction.

Furthermore, business analytics supports business growth by improving operational efficiency, optimizing pricing strategies, and enabling better financial planning. It also helps organizations understand customer preferences more accurately, which leads to improved product offerings and stronger brand loyalty. In the case of Reliance Trends in Bangalore, analytics can be used to track sales performance, manage stock levels across stores, and design targeted promotional strategies.

1.2 Objective

1. To examine how analytics supports strategic planning and business expansion.
2. To suggest ways to improve the use of business analytics in organizations.
3. To identify the strengths and weakness of the company's financial performance
4. To analyse the impact of financial decisions on the overall growth of the company
5. To provide suggestions and recommendations for improving financial performance

1.3 METHODOLOGY

The study adopts a mixed research approach, combining both quantitative and qualitative methods. The quantitative approach is used to measure the impact of business analytics on business growth through numerical data such as customer

satisfaction and purchase behaviour. The qualitative approach helps in understanding customer opinions and experiences regarding analytics-driven services. The study is conducted with reference to Reliance Trends to analyse real-world application.

2. Data Collection

a) Primary Data

Primary data is collected directly from respondents to ensure accuracy and relevance. The data is gathered from customers of Reliance Trends through:

- Structured questionnaires
- Online surveys (Google Forms)
- Informal discussions

This helps in understanding customer satisfaction, preferences, and the influence of business analytics on their buying behaviour.

b) Secondary Data

Secondary data is collected from existing sources to support the study. These include:

- Research journals and articles on business analytics
- Reports of Reliance Retail
- Company websites
- Books and online sources related to retail trends in Bangalore

3. Sampling Method

- Population:

Customers visiting Reliance Trends stores in Bangalore.

- Sampling Technique:

The study uses convenience sampling, where respondents are selected based on ease of access and availability.

1.4 Scope of the Study

1. Industry Scope

The study focuses on the retail industry, particularly the fashion retail segment. It examines how business analytics is used to improve operations, customer experience, and overall business performance.

2. Company Scope

The research is conducted with specific reference to Reliance Trends. It analyses how the company applies business analytics in areas such as customer relationship management, sales strategies, and personalized marketing.

3. Geographical Scope

The study is limited to selected outlets of Reliance Trends in Bangalore. The findings are based on data collected from customers in this region.

4. Functional Scope

The study covers key functional areas where business analytics is applied, including:

- Customer satisfaction
- Purchase behavior
- Pricing and promotional strategies
- Store experience and service quality

5. Analytical Scope

The research focuses on analyzing the relationship between business analytics practices and business growth indicators such as:

- Sales performance
- Customer retention
- Customer satisfaction

1.5 Limitations

1. Limited Sample Size

The study is based on a small number of respondents (50–100), which may not fully represent all customers of Reliance Trends.

2. Geographical Limitation

The research is restricted to selected outlets in Bangalore, so the findings may not be applicable to other regions.

3. Time Constraints

The study is conducted within a limited time period, which may affect the depth of data collection and analysis.

4. Response Bias

The data collected is based on customer responses, which may be influenced by personal opinions, moods, or incomplete understanding.

5. Limited Access to Company Data

The study relies mainly on external data, as detailed internal data from Reliance Retail is not accessible.

CHAPTER 2

THEORETICAL FRAMEWORK

1. Introduction

The theoretical framework provides the foundation for understanding the relationship between business analytics and business growth. In today's competitive retail environment, organizations increasingly rely on data-driven insights to improve decision-making, enhance customer experience, and achieve sustainable growth. This study focuses on how business analytics influences various aspects of business performance with reference to Reliance Trends.

Business analytics involves the use of data analysis tools, statistical techniques, and predictive models to convert raw data into meaningful insights. In the retail sector, it plays a crucial role in understanding customer preferences, optimizing pricing strategies, managing inventory, and improving service quality. These factors collectively contribute to business growth.

2. Theoretical Foundations

a) Data-Driven Decision-Making Theory

This theory emphasizes that decisions based on data and factual analysis are more accurate and reliable compared to those based on intuition. Business analytics enables organizations to collect, process, and analyze large volumes of data to identify patterns and trends.

In the context of retail, data-driven decision-making helps in:

- Identifying customer buying behavior
- Forecasting demand and sales trends
- Improving marketing strategies
- Enhancing operational efficiency

For a company like Reliance Trends, the use of analytics supports better decision-making in areas such as product selection, promotions, and customer engagement.

b) Resource-Based View (RBV)

The Resource-Based View theory states that organizations achieve competitive advantage through valuable, rare, and inimitable resources. In modern businesses, data and analytics capabilities are considered strategic resources.

Companies like Reliance Retail utilize business analytics as a core resource to:

- Improve operational efficiency
- Enhance innovation
- Strengthen competitive positioning

Analytics capabilities allow firms to respond quickly to market changes and customer demands, which is essential for business growth.

c) Customer Relationship Management (CRM) Theory

CRM theory focuses on building and maintaining long-term relationships with customers. Business analytics plays a key role in CRM by analysing customer data and providing insights into their preferences, behavior, and purchasing patterns.

In retail, CRM supported by analytics helps in:

- Personalized marketing and recommendations
- Customer segmentation
- Improving customer service
- Increasing customer loyalty and retention

For Reliance Trends, effective CRM practices contribute to enhanced customer satisfaction and repeat purchases.

d) Technology Acceptance Model (TAM)

The Technology Acceptance Model explains how users accept and adopt new technologies. According to this model, perceived usefulness and ease of use influence the adoption of technology.

In the context of business analytics:

- Employees adopt analytics tools when they find them useful and easy to use
- Customers respond positively to technology-driven services such as digital payments and personalized offers

This model supports the idea that successful implementation of analytics depends on user acceptance, which ultimately affects business performance.

3. Conceptual Framework of the Study

The study is based on the following conceptual model:

- Independent Variable:

Business Analytics

(data analysis, predictive tools, CRM systems, personalization techniques)

- Mediating Variables:
- Service quality

- Pricing strategies
- Store environment
- Customer experience
- Dependent Variables:

Business Growth

(customer satisfaction, customer retention, sales growth, profitability)

5. Application to the Study Context

In the case of Reliance Trends, business analytics is used to understand customer preferences, manage inventory, and design effective marketing strategies. The company leverages data to provide personalized offers, improve store layout, and enhance customer experience.

In a competitive retail market like Bangalore, the effective use of analytics helps the company stay competitive and achieve consistent growth

CHAPTER 3

COMPANY PROFILE

3.1 Introduction

Reliance Trends is one of the leading fashion retail chains in India and operates under Reliance Retail, which is a subsidiary of Reliance Industries Limited. Since its establishment in 2006, the company has grown rapidly and established a strong presence across the country. It offers a wide range of fashionable clothing and accessories for men, women, and children at affordable prices. The brand focuses on providing trendy designs, good quality products, and value for money, making it popular among middle-income customers.

The retail industry in India has experienced significant growth in recent years, and Reliance Trends has played an important role in this development. With its customer-centric approach and wide product range, the company has become one of the most preferred fashion destinations in the country.

Reliance Trends aims to provide “fashion at affordable prices” to customers. The company offers various categories of products such as casual wear, formal wear, ethnic wear, and accessories. Its stores are designed to provide a comfortable shopping experience with proper layout, lighting, and customer service.

The store located in Hoskote is one of the many outlets that serve customers in semi-urban areas. It caters to the fashion needs of the local population by offering trendy and affordable clothing. The store is well-organized and provides a wide range of products suitable for different age groups and preferences.

In addition to serving customers, the store also contributes to local employment by hiring staff from nearby areas. Employees play a key role in ensuring smooth store operations, customer service, and sales performance. The store follows company policies and guidelines to maintain service quality and customer satisfaction.

Mission & Vision of Reliance Trends

Mission

- To provide affordable and trendy fashion for all customer segments
- To ensure high-quality products at competitive prices
- To deliver a comfortable and satisfying shopping experience
- To use business analytics and customer data for better decision-making
- To focus on customer satisfaction and loyalty
- To continuously innovate in fashion and retail strategies
- To maintain efficient supply chain and inventory management
- To expand accessibility through multiple store locations and online platform
- To offer a wide variety of products under one roof
- To create value for customers through quality, price, and service

Vision

- To become a leading fashion retail brand in India
- To achieve sustainable business growth through innovation
- To enhance customer experience using technology and analytics
- To expand presence across urban and rural markets
- To build a strong and loyal customer base
- To be recognized for quality, affordability, and style
- To adopt digital transformation and modern retail practices
- To strengthen market position under Reliance Retail
- To compete effectively with national and international brands
- To contribute to the growth of the Indian retail industry

SWOT

Strengths

Reliance Trends has several strong advantages that contribute to its success in the retail market. It is backed by Reliance Retail, which provides strong financial support and a wide distribution network. The brand offers affordable pricing and a wide variety of fashion products, making it attractive to middle-class consumers. It also has a strong presence across India with multiple outlets, increasing accessibility for customers. Additionally, the company uses business analytics and customer data to understand buying behaviour and improve marketing strategies. Its focus on customer experience, store layout, and seasonal collections also enhances its competitive position.

Weaknesses

Despite its strengths, Reliance Trends faces certain limitations. The brand primarily focuses on the mass market, which may limit its appeal to premium or luxury customers. There can be inconsistency in product quality and customer service across different outlets. Compared to international brands, it may have limited global recognition. Also, reliance on physical stores can be a disadvantage if digital platforms are not equally strong. Limited transparency in internal analytics and operational data can also restrict deeper analysis and improvement.

Opportunities

There are several growth opportunities available for Reliance Trends. The increasing use of business analytics and digital technology can help the company further enhance customer personalization and decision-making. The growth of e-commerce and online shopping

provides an opportunity to expand its digital presence. Expansion into tier-2 and tier-3 cities can increase market share. The rising demand for affordable fashion and fast fashion trends also creates new opportunities. Additionally, adopting AI-based analytics and customer insights can improve inventory management and customer satisfaction.

Threats

Reliance Trends operates in a highly competitive environment. It faces strong competition from brands like Pantaloons and Zudio, as well as international brands. Changing fashion trends and customer preferences can affect sales if the company fails to adapt quickly. The rise of online platforms and e-commerce giants increases competitive pressure. Economic fluctuations, inflation, and changes in consumer spending behaviour can also impact business growth. Additionally, data privacy concerns and technological challenges may affect the effective use of business analytics.

The survey methodology

The survey methodology adopted for this study titled “A Study on the Role of Business Analytics in Business Growth with Reference to Reliance Trends” is primarily based on a quantitative research approach. The survey was conducted to collect primary data from customers in order to understand their perceptions, satisfaction levels, and buying behaviour. The target respondents of the study include customers who have previously shopped at Reliance Trends, as they can provide relevant insights into the company’s services and analytics-driven practices. The sampling technique used for the study is convenience sampling, where respondents are selected based on their availability and willingness to participate, and the sample size consists of approximately 50 respondents.

The data was collected using a structured questionnaire consisting of close-ended, multiple-choice, and Likert scale questions to ensure ease of response and effective analysis. The questionnaire was distributed through both online platforms such as Google Forms and direct interaction with customers. The questions were designed to gather information related to customer satisfaction, product quality, pricing, store environment, awareness of offers, and the impact of business analytics on the overall shopping experience. The collected data was then analysed using simple statistical tools such as percentage analysis, tabulation, and graphical representation through charts like bar graphs and pie charts using MS Excel or Google Sheets.

Although the survey method provides valuable first-hand information, it has certain limitations. The study is restricted to a limited number of respondents and is subject to personal bias, as responses depend on individual perceptions and experiences. Additionally, time constraints and limited awareness among respondents regarding business analytics may affect the accuracy of the data. Despite these limitations, the survey methodology offers a systematic approach to understanding the role of business analytics in enhancing customer satisfaction and contributing to business growth at Reliance Trends.

CHAPTER 4

DATA ANALYSIS AND INTERPRETATION

4.1 Table showing Age-wise Distribution of Respondents

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
BELOW 20	20	28%
ABOVE 20	14	46%
ABOVE 30	11	22%
ABOVE 40	2	4%
TOTAL	50	100%

4.1 Chart showing Age-wise Distribution of Respondent

Interpretation

Most respondents (46%) belong to the above 20 age group, followed by 28% below 20. This shows that the majority of customers are young adults, which is the main target market.

4.2 Table showing Occupation-wise Distribution of Respondents

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
STUDENT	29	58%
EMPLOYEE	17	34%
BUSINESS	4	8%
TOTAL	50	100%

4.2 Chart showing Occupation-wise Distribution of Respondents

Interpretation

58% respondents are students, 34% employees, and 8% business people. This indicates that students form the major customer base.

4.3 Table showing Education-wise Distribution of Respondents

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
SSLC	8	16%
PUC	8	16%
DEGREE	24	48%
POST GRADUATE	10	20%
TOTAL	50	100%

4.3 Chart showing Education-wise Distribution of Respondents

Interpretation

48% respondents are degree holders, followed by 20% postgraduates. This shows that most respondents are educated and aware consumers.

4.4 Table showing Distribution of Respondents Based on Opinion on Overall Performance of the Company

PARTICULARS	NO. OF RESPONDENTS	PERCENTAAGE
EXCELLENT	26	52%
GOOD	12	24%
AVERAGE	12	24%
POOR	1	0%
TOTAL	50	100%

4.4 Chart showing Distribution of Respondents Based on Opinion on Overall Performance of the Company

Interpretation

52% rated the company as excellent, while 24% rated it good. This indicates a strong positive perception of the company's performance.

4.5 Table showing Distribution of Respondents Based on Financial Stability of the Company

PARTICULARS	NO. OF RESONDENTS	PERCENTAGE
YES	32	64%
NO	8	16%
NOT SURE	10	20%
TOTAL	50	100%

4.5 Chart showing Distribution of Respondents Based on Financial Stability of the Company

Interpretation

64% believe the company is financially stable, while 20% are unsure. This reflects confidence in the company's financial position

4.6 Table showing Distribution of Respondents Based on Level of Satisfaction with Company's Growth

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
VERY SATISFIED	21	42%
SATISFIED	19	38%
NEUTRAL	10	20%
DISSATISFIED	0	0%
TOTAL	50	100%

4.6 Chart showing Distribution of Respondents Based on Level of Satisfaction with Company's Growth

Interpretation

42% are very satisfied and 38% satisfied. This shows a high level of satisfaction regarding the company's growth.

4.7 Table showing Distribution of Respondents Based on Opinion on Company Growth Over Time

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
YES	28	56%
NO	12	24%
MAYBE	10	20%
TOTAL	50	100%

4.7 Chart showing Distribution of Respondents Based on Opinion on Company Growth Over Time

Interpretation

56% believe the company is growing, while 20% are unsure. This indicates a positive growth perception.

4.8 Table showing Distribution of Respondents Based on Perception of the Biggest Strength of the Company

PARTICULARS	NO. OF RESPONDENTS	PERCENTAGE
STRONG PROFITS	20	40%
GOOD MANAGEMENT	22	44%
MARKET REPUTATION	8	16%
INNOVATION	0	0%

80% believe the company has made good financial decisions recently, indicating strong confidence in management

CHAPTER 5
FINDINGS, SUGGESTIONS, LEARNING OUTCOMES AND
CONCLUSION

5.1 FINDINGS

- Most of the respondents belong to the young age group (above 20 years), showing that young people are the main customers.
- Majority of the respondents are students, which means the brand is popular among youth
- .
- Most respondents are educated (degree holders), so they are aware and informed customers
- .
- Many respondents rated the overall performance of Reliance Trends as good or excellent.
- Most people believe that the company is financially stable and growing.
- Customers are generally satisfied with the growth and performance of the company.
- Good management and profits are seen as the main strengths of the company.
- A large number of respondents feel that the company uses its resources efficiently.
- Most respondents agree that the company has good financial management and handles risks well.
- Many customers trust the company financially, which is a positive sign.

5.2 SUGGESTIONS

1. Reliance Trends should use business analytics more effectively to understand customer needs and improve decisions.
2. The company should try to reduce wastage of resources so that it can save costs and work more efficiently.
3. It should improve its online platforms and digital services to attract more customers.
4. The company should maintain good quality products and provide the same level of service in all stores.

5. It can try to expand its business by reaching new customers and new areas.
6. The company should use modern technology like data analytics tools to improve its performance.
7. Customer feedback should be taken regularly and used to improve services.
8. The company should clearly communicate its offers and services to customers.
9. It should introduce new fashion trends and give attractive pricing to stay competitive.
10. The company should focus more on customer satisfaction to build long-term loyalty.

5.3 LEARNING OUTCOMES

- I learned about the concept of business analytics and how it is used in business.
2. I understood how business analytics helps in decision-making and business growth.
 3. I got knowledge about customer behaviour and preferences in the retail sector.
 4. I learned how companies like Reliance Trends use data to improve their performance.
 5. I understood the importance of customer satisfaction and service quality.
 6. I gained knowledge about financial stability, growth, and management of a company.
 7. I learned how to conduct a survey and collect primary data.
 8. I developed skills in analysing data using charts and percentages.
 9. I improved my analytical and problem-solving skills through this project.
 10. I got practical exposure to how business concepts are applied in real life.

5.4 CONCLUSION

The present study on the role of business analytics in business growth with reference to Reliance Trends highlights that analytics plays a significant role in improving decision-making and overall performance. The findings of the study indicate that the majority of respondents have a positive perception of the company in terms of its performance, financial stability, and growth.

The study reveals that effective management, efficient use of resources, and proper financial decisions are key factors contributing to business success. It is also observed that customer satisfaction is high, and most respondents trust the company's financial position and growth potential. At the same time, certain areas such as resource wastage, digital presence, and service consistency require improvement.

Furthermore, the study emphasizes that better decision-making supported by business analytics can enhance business growth, customer satisfaction, and competitiveness. The use of data-driven strategies enables the company to understand customer needs, improve operations, and respond to market changes effectively.

In conclusion, Reliance Trends has strong growth potential and a positive market position. By focusing on innovation, efficient resource utilization, and advanced analytics, the company can achieve sustainable growth and maintain its competitive advantage in the retail sector.
